

BALAKRISHNAN SRINIVASAN

Senior Software Engineer | React.js | Node.js | React Native | Full-Stack Development

+91 7598058190 / 8248676820 • balakrishnan.srini64@gmail.com • linkedin.com/in/balki14101 • github.com/balki14101

Summary

Senior Software Engineer with 4 years of experience delivering enterprise-grade React.js and React Native applications across the full development lifecycle, from frontend architecture to backend API design, testing, and cloud deployment. Led frontend development from scratch for an assessment platform, building the React.js application with backend integration and extending the client's mobile app with a React Native module. Skilled in REST API design and integration (Python, Flask/FastAPI, Node.js), SQL and NoSQL databases (PostgreSQL, MongoDB), dynamic survey/workflow logic, AWS EC2/Docker-based deployment, and CI/CD pipelines. Has also guided backend and database architecture decisions, mentored junior developers, and worked in Agile teams across production systems, including a healthcare data platform.

Skills

Frontend: JavaScript (ES6+), TypeScript, React.js, Redux, HTML5, CSS3, Responsive Design, REST API Integration, JWT/OAuth

Backend, Database & Cloud/DevOps: Python (Flask, FastAPI), Node.js, Express.js, REST API Design, SQL (PostgreSQL), MongoDB, Mongoose, Application Security (OTP, RBAC), AWS (EC2, S3), Docker, CI/CD (GitHub Actions), Firebase

Mobile: React Native CLI, Expo, Native Modules, React Navigation, Push Notifications, Async Storage, Play Store Deployment, Xcode, Gradle

Testing & Tools: Unit Testing (Jest), Integration Testing, Postman, Razorpay, Performance Optimisation, Debugging (Xcode, Android Studio), Git, GitHub, Jira, Agile/Scrum, Code Reviews, Clean Code, Technical Documentation, Problem Solving (DSA, LeetCode), Claude Code

Collaboration: Work with UI/UX designers, backend developers, QA, Agile ceremonies (sprint planning, stand-ups, reviews), mentor junior developers.

Experience

Exafluence

Chennai, India

Senior Software Engineer

06/2022 - Present

Tech Stack – React.js, React Native, Python (Flask/FastAPI), Node.js, MongoDB, AWS, Docker

Enterprise Mental Health Assessment Platform

- Led a 5-member frontend team to build the React.js web app from scratch with backend integration, plus a new React Native module for the client's mobile app, with feature parity via a reusable UI component library.
- Simplified complex survey logic by engineering dynamic, branching workflows with real-time scoring and adaptive navigation across conditional question paths, on both web and mobile.
- Built responsive, reusable, and maintainable user interfaces in modern JavaScript (ES6+) and TypeScript, applying clean-code principles and structuring components so they could be tested independently.
- Designed and optimised REST API architecture using Flask/FastAPI, reducing response times by 35% through structured endpoint design, request validation, and performance tuning across survey and reporting workflows.
- Automated post-survey reporting by building a Python-based report-generation module that extracted survey data and integrated it directly into the core application workflow.
- Integrated Razorpay payment gateway for slot bookings, covering order creation, signature verification, and webhook-based confirmation, and validated success, failure, and retry flows in Razorpay's sandbox environment.
- Strengthened application security and protected sensitive assessment data by designing OTP-based authentication and authorisation mechanisms alongside REST API integrations.
- Ensured release quality with a layered testing approach: Jest unit tests for logic and components, Postman-driven API and integration testing for REST endpoints, and debugging across web and mobile before every release.
- Improved release reliability using Git feature-branch workflows, pull requests, and code reviews, with CI/CD pipelines and Docker deployments on AWS EC2 for web and Android/Play Store releases.
- Worked closely with UI/UX designers, backend developers, and QA in an Agile team, taking part in sprint planning, stand-ups, reviews, and retrospectives to deliver features on schedule.

Healthcare Data Platform | *Architecture & Technical Guidance*

- Guided backend and database architecture for a Node.js application, defining data models and implementing role-based access control for secure, scalable data handling.
- Mentored 3 junior developers on project setup and deployment planning, collaborating with backend developers and QA and contributing to report generation.

Native-to-Cross-Platform Migration | *Silicon Valley-Based Client*

- Migrated biometrics, push notifications, and chat from native Android/iOS into a unified React Native codebase using platform-specific native modules.
- Standardised the UI with reusable React Native components and resolved integration issues found during migration.
- Debugged native code in Xcode and Android Studio and built native screens where platform-specific behaviour was required.

SketchMonk

Bangalore, India

Software Developer Intern

01/2022 - 05/2022

Tech Stack – React, React Native, REST APIs

- Built 5 production UI modules and integrated 10+ REST APIs, contributing to a 60% increase in user retention while improving app speed by 25% through rendering and state-management optimisation.

Personal Projects

DueMate | *React Native, Expo*

- Built a task-reminder app with customizable recurring schedules and due-date notifications, using AsyncStorage to handle data caching and offline functionality for local persistence.

QuickServe - In Progress | *React.js, Node.js, MongoDB, React Native*

- Building a multi-provider slot-booking marketplace with JWT role-based auth and atomic slot-locking to prevent double-booking. Backend fully built and tested (15+ endpoints, Jest unit tests). React.js and React Native clients in development.

Inshorts Clone | *React Native, Redux*

- Built a cross-platform news app with Redux, category-based browsing, and integration with the official Inshorts developer API.

Education

SRM IST Chennai

06/2018 - 05/2022

B.Tech, Computer Science | CGPA: 9.3/10.0

Key Achievements

Company Recognition Award (Project Delivery Excellence): Recognised by Exafluence leadership for end-to-end ownership in delivering enterprise-grade applications, from architecture through production.

Engineering Excellence Certificate (Consistent Performance): Awarded for sustained high performance on high-visibility product features across multiple project cycles.
